Isabel Su

(908)839-0085 | isabelsu2025@gmail.com | linkedin.com/in/Isabel-Su | github.com/Isabel-Su

Education

Georgia Institute of Technology, Atlanta, GA — May 2028
Bachelor of Science in Computer Science, Minor in Mathematics — 4.0 GPA
Relevant Coursework: Linear Algebra, Data Structures and Algorithms, Computer Organization and Programming, Discrete Math, Honors Design & Analysis of Algorithms, Systems & Networks, Applied Combinatorics

Technical Skills

Languages: Java, Python, C/C++, Swift/SwiftUI, SQL, UNIX, Assembly, Bash, HTML, CSS
Frameworks/Tools: Ollama, Scikit-Learn, Pandas, NumPy, Matplotlib, Git, Spring Boot, MongoDB, Firebase, React, Cursor

Experience

Georgia Institute of Technology - School of Computing Instruction — Aug 2026 – Present
Discrete Math Teaching Assistant — *Atlanta, GA*

- Held office hours and recitation sections for 40+ students, reinforcing core discrete math concepts including propositional logic, set theory, combinatorics, graph theory, and proof techniques (e.g. induction, contradiction)
- Graded problem sets and exams for a 400+ student course, providing detailed feedback on proof rigor and helping students debug proof strategies, while maintaining grading consistency across a team of TAs via shared rubrics

Georgia Tech AI Makerspace Nexus — Jan 2026 – Present
Software Developer — *Atlanta, GA*

- Collaborated within a 3-person subteam to build a RAG pipeline with open-source LLMs, refactoring the legacy codebase into a deployable, student-facing notebook spanning AI, biology/chemistry, and CS coursework
- Developed feedback system and chatbot components central to the quizzing notebook's interactive functionality
- Designing a zero-shot object association pipeline evaluated against occlusion and fast-motion difficulty strata on the Ego-Exo4D dataset, benchmarking against trained SOTA methods (DOMR, ObjectRelator) using an IMU-corroboration signal excluded from standard evaluation

Prudential Financial — Jun 2026 – Aug 2026
Finance Intern — *Newark, NJ*

- Eliminated 13+ hours of manual work quarterly by automating SOX checklist report consolidation using VBA, improving accuracy while resolving a pain point identified as a candidate for a paid AI vendor solution
- Supported materiality threshold and scoping decisions for Prudential's company-wide SOX/MAR program, reconciling multi-billion-dollar balances across ledgers and reports amid business-wide restructuring

AI Safety Initiative — Feb 2026 – May 2026
Technical Safety Fellow — *Atlanta, GA*

- Conducted in-depth technical reviews of 3–4 AI safety papers weekly across RLHF, alignment, unlearning, and adversarial robustness, synthesizing methodologies and results into structured analyses
- Evaluated misalignment failure modes and jailbreaking vulnerabilities across modern LLM architectures, applying risk frameworks to assess model control and robustness gaps

Projects

Talking Fingers | *iOS Club iPhone App* — Jan 2026 – Apr 2026

- Led a 7-person subteam within a 30+ person team to build foundational functionality for a computer-vision-based American Sign Language learning app aimed at expanding accessibility to sign language education
- Implemented multiple spaced-repetition-based scheduling algorithms to optimize long-term retention, and built semantic search functionality enabling natural-language content discovery across the lesson library
- Drove core UI/UX implementation for a feature-rich product that became the first app in GT iOS Club history to sweep all three semi-annual awards — Popular App, Best Design, and Best App Overall

GridX | *HackGT Project* — Sep 2025

- Designed a formula-driven valuation model framing NFL players as tradeable assets, scoring player and team value from performance statistics to drive rankings and valuations
- Collaborated with 3 teammates to build functional end-to-end prototype for React-based visualizations displaying team valuations and performance trends under 36-hour time constraints
